

ABSTRACT

A folded disposable diaper, includes a diaper main body having a front abdomen portion, a back portion, and a crotch portion interconnecting the front abdomen portion and the back portion. The diaper main body has indicia indicating a size of the diaper main body and/or indicating a side of the front abdomen portion or the back portion. The diaper main body is folded over at a fold so as to define a first diaper body portion on one side of the fold and a second diaper body portion on another side of the fold, the indicia being disposed on an edge face of the fold, and the indicia being viewable when two or more like folded diaper main bodies are stacked on one another. The indicia is also disposed on and extended to both the first diaper body portion and the second diaper body portion.
